Subject: question/s for CPN-21-010
Date: Tuesday, June 1, 2021 2:31:23 PM

Hello Michelle,

I have the following questions for CPN-21-010 Aura Solar representing John Aikey, owner of property at 2890 County Road 10, TM#84.00-1-17.200.

- 1) Are the panels moved via an active or passive process?

Note: With the following understanding:

-Active trackers track the sun from east to west using electronic sensors and motor or actuator drives are normally quiet

-Passive trackers use no motors,/ gears, etc. which could produce a loud noise

a. <!--[endif]-->If active,

- 1) What are the decibels of each active motor/system?
- 2) How many motors will be installed?
- 3) What would the total sound rating be for 100% of panel movement?
- 4) At what time of day/night will the panels reverse direction?
- 5) Will the panels move all together or in groups?

Thank you

Bob Lacourse
